

Sauren Global Defensiv - Factsheet - 30.11.2025

Marketing Information

Investment profile

Sauren Global Defensiv is an actively managed fund of funds with a conservative asset management approach. As a modern multi-asset strategy, it offers a broadly diversified and overall defensively structured portfolio. Sauren Global Defensiv invests irrespective of benchmarks mainly in other funds, including absolute return funds, bond funds, equity funds and multi-strategy funds. You will find detailed information about the investment opportunities in the current valid prospectus.

The fund selection is done according to Sauren's established person-related investment philosophy, with a focus on the skills of the fund managers in consideration of the asset under management.

Notes on the performance

Source: CleverSoft FondsDB, Sauren Fonds-Research AG; As at: 30 November 2025

The Investor would like to buy shares for 1,000.-- € and due to a 3 % front-end load the total payable amount rises to 1,030.-- €. The gross performance (BVI method) is based on the published redemption prices of the Fund of Funds, which includes all costs incurred at the fund level (e.g. management fee), the net performance also includes the front-end load. The front-end load is only payable at the day of investment and therefore reduces the performance in the first year. In the following years no front-end load is considered, as such the net performance is not displayed in the bar chart as it is equal to the gross performance. Additional costs may be incurred at the investor level (e.g. custody costs). If the front-end load were taken into account in the line chart the performance in the chart would be lower.

Due to its composition / the techniques used for its management, the fund is exposed to increased volatility; this means that unit prices may be subject to considerable upward and downward fluctuations, even within short periods of time.

The chart shows the performance achieved under the same investment conditions of a unit class launched in 2003 of a fund previously existing in a different legal form until December 31, 2021. The Unit class is that of a fund that previously held another legal form, but was adapted in 2014 to meet European requirements for the funds business and has been UCITS-compliant since then.

Past performance is not a reliable indicator of future performance.

Net Equity Exposure

as at 31 October 2025

Indicative Net Equity Exposure	14.7 %
--------------------------------	--------

The indicative net equity exposure is calculated based on the weighted net equity exposure of each target fund as well as the instruments held by the fund of funds. This includes direct equity exposure as well as exposure via derivatives. The calculation of the net equity exposure is dependent on the supply and the quality of the data as well as on the point in time when the data is supplied by the individual target fund. As such the indicative net equity exposure is always to be treated as a rough estimate based on the preceding month end.
